Quentin & Dundee

Cookie Notice

The browser storage used by the Q&D website and how to manage it.

Effective September 26, 2026

PUBLIC

1. What the site uses today

The Quentin & Dundee website currently uses first-party storage to remember your privacy-notice preference. No optional analytics cookies, advertising pixels, or cross-site tracking integrations are active. Acknowledging the notice does not authorize future optional tracking.

Cookies are small records a website can ask your browser to store. Local storage is a separate browser feature that lets the website retain a local copy of a preference. Both are specific to the browser and device you use.

2. Storage details

The preference cookie is used to remember that you have acknowledged the current essential-storage notice. A local copy lets the interface reflect the same choice. Neither record is used to profile you or track you across other websites.

- Privacy-preference cookie: first-party; purpose is remembering your website privacy preference; expires after up to one year or when you clear it.
- Privacy-preference local storage: first-party; purpose is keeping the notice consistent in your browser; has a matching expiry of up to one year and can be removed in browser settings.
- Optional analytics and advertising storage: none currently configured.

3. Manage your preference

Select Privacy choices in the footer to reopen the notice. You can delete or block website storage through your browser settings; clearing the preference may cause the notice to appear again. Preferences do not automatically carry across different browsers or devices.

A Global Privacy Control signal keeps optional tracking disabled. If optional services are introduced, we will explain their purposes and provide the relevant choices before activation where consent is required. The current Got it button records only the essential-storage preference.

4. Questions

For questions about browser storage or a privacy request, contact privacy@quentindundee.com. The Website Privacy Statement provides more information about correspondence and technical information used to operate the site.
